DESIGN INNOVATION

# FORM

## DESIGNED AROUND PEOPLE

Good furniture design begins with the person using it. We consider seat height, depth, width, back support and arm positioning to create furniture that supports comfort, posture and everyday movement.

## SUPPORTING MOVEMENT

Small dimensional details can make a significant difference. Considered seat height and depth, combined with supportive armrests, can make sit-to-stand transitions easier, supporting more comfortable and confident movement.

## FORM WITH PURPOSE

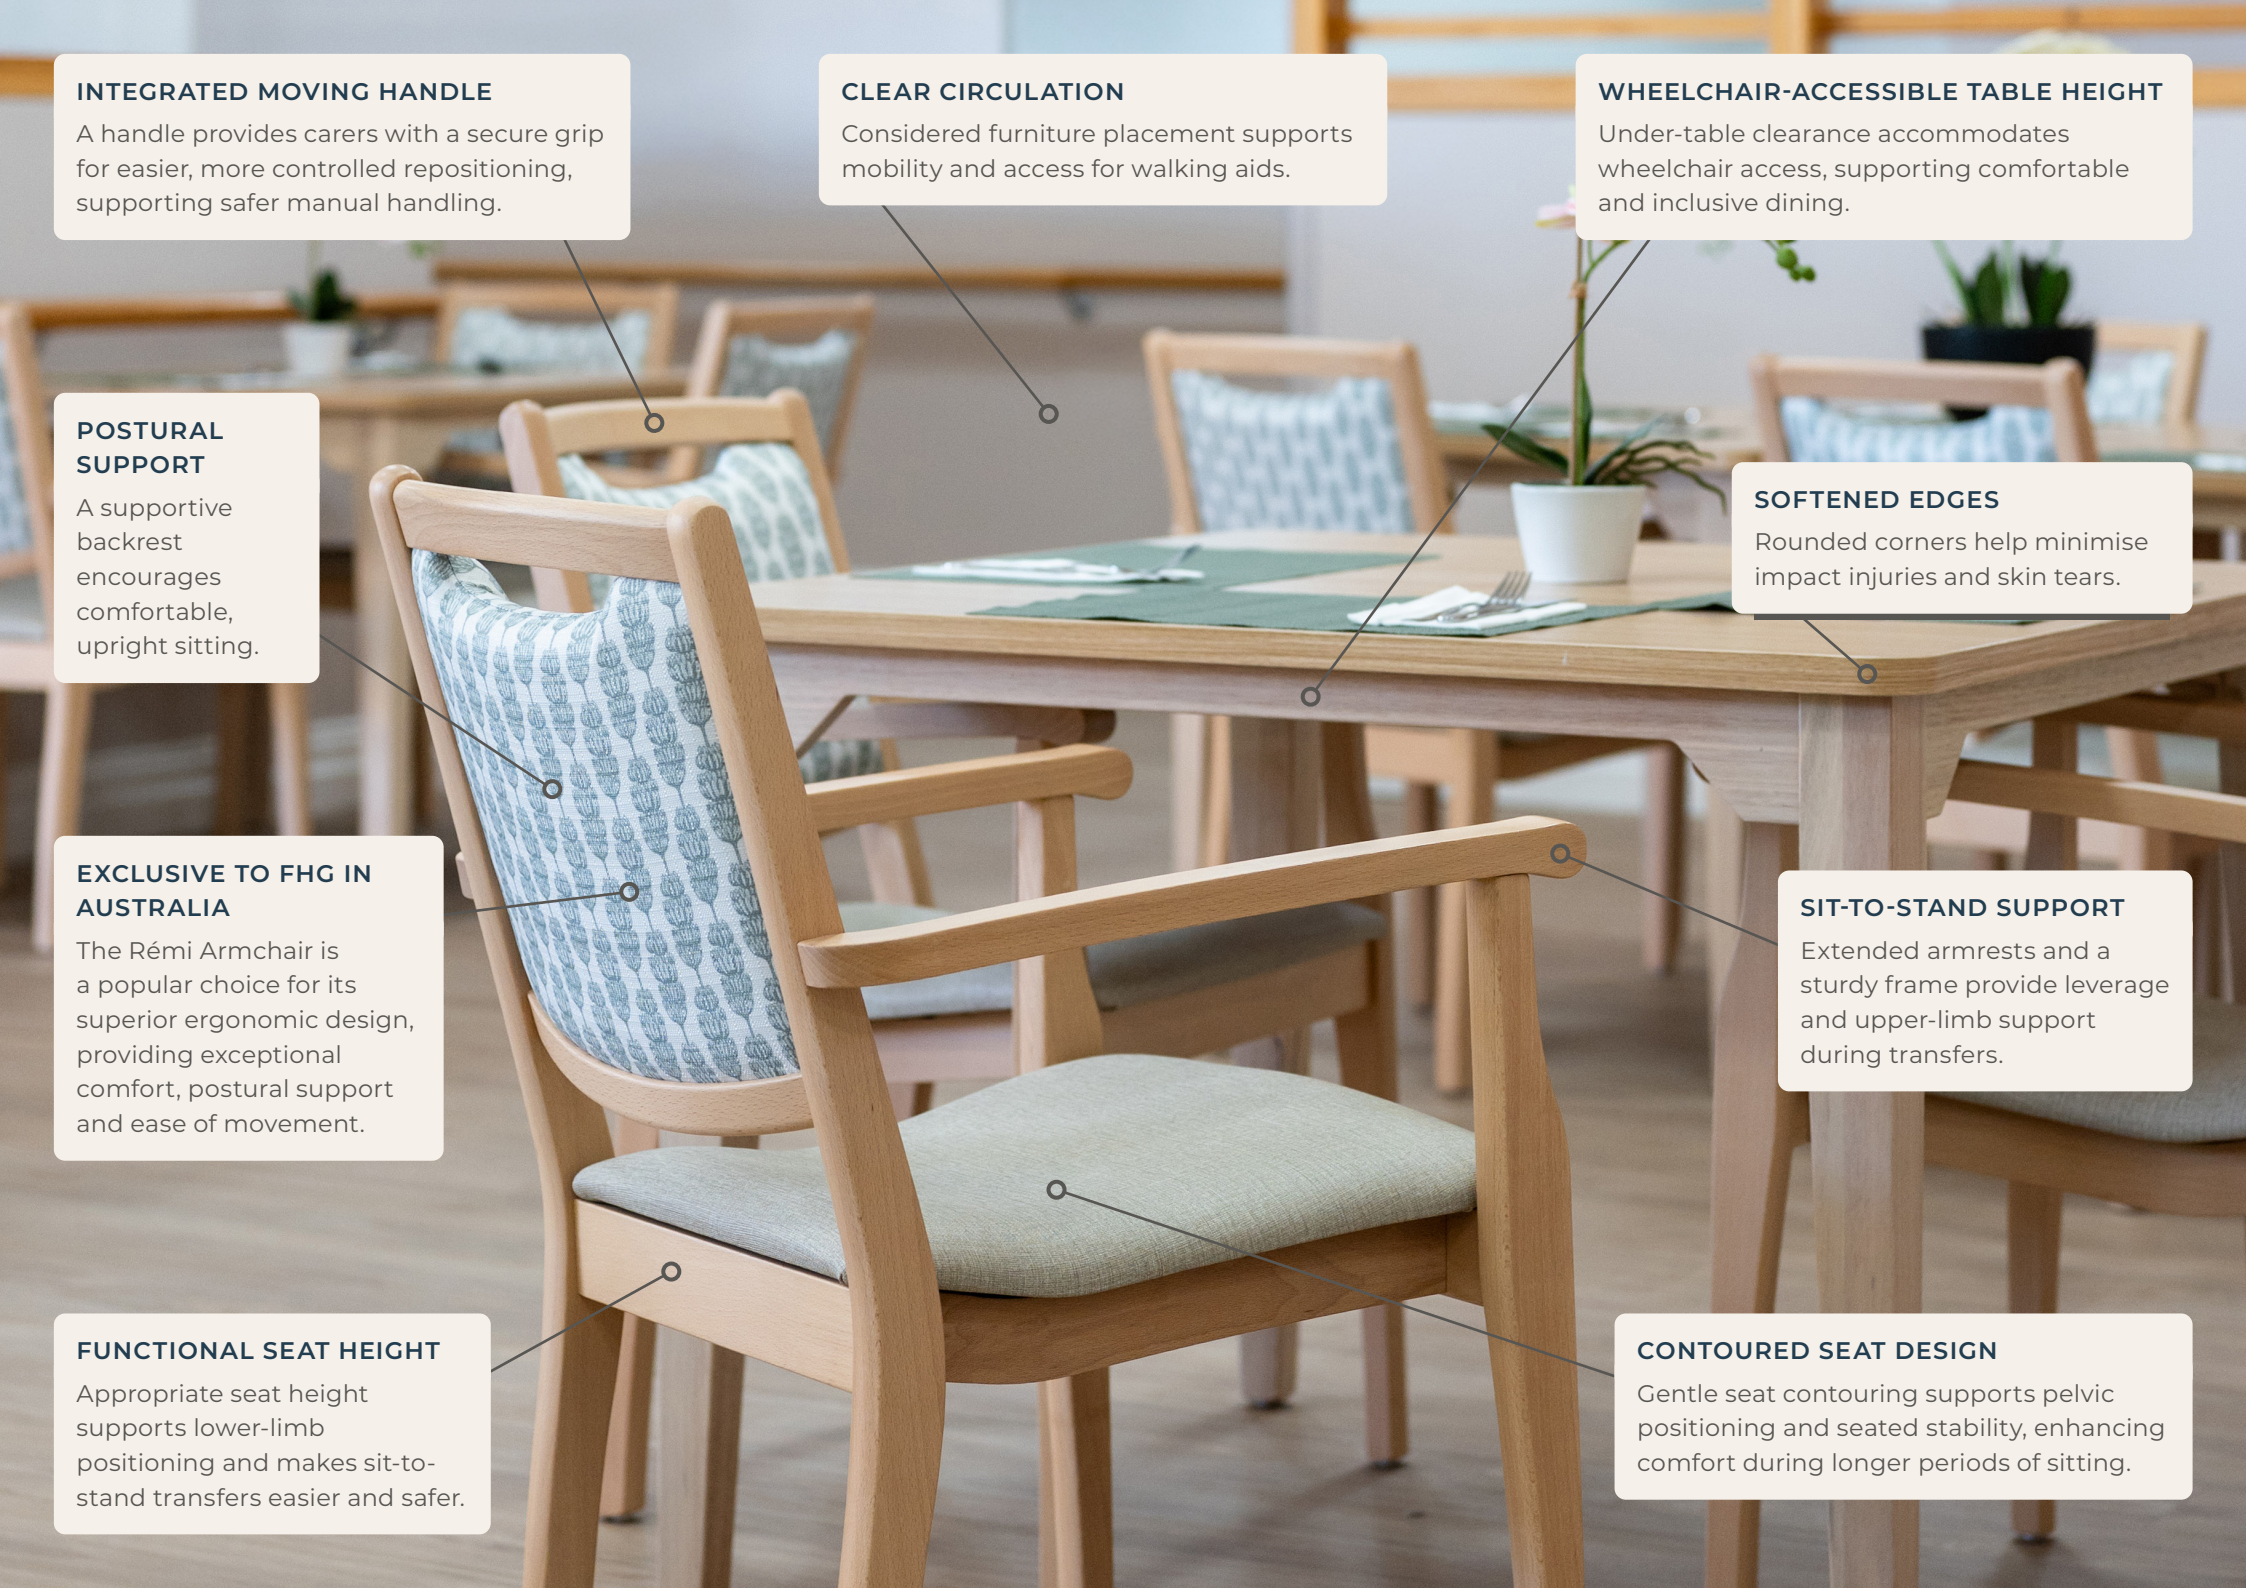

Our approach brings ergonomic principles and evidence-informed design together with aesthetics. The result is furniture shaped not simply by how it looks, but by how people sit, move, interact and live within a space.

### INTEGRATED MOVING HANDLE

A handle provides carers with a secure grip for easier, more controlled repositioning, supporting safer manual handling.

### CLEAR CIRCULATION

Considered furniture placement supports mobility and access for walking aids.

### WHEELCHAIR-ACCESSIBLE TABLE HEIGHT

Under-table clearance accommodates wheelchair access, supporting comfortable and inclusive dining.

### POSTURAL SUPPORT

A supportive backrest encourages comfortable, upright sitting.

### SOFTENED EDGES

Rounded corners help minimise impact injuries and skin tears.

### EXCLUSIVE TO FHG IN AUSTRALIA

The Rémi Armchair is a popular choice for its superior ergonomic design, providing exceptional comfort, postural support and ease of movement.

### SIT-TO-STAND SUPPORT

Extended armrests and a sturdy frame provide leverage and upper-limb support during transfers.

### FUNCTIONAL SEAT HEIGHT

Appropriate seat height supports lower-limb positioning and makes sit-to-stand transfers easier and safer.

### CONTOURED SEAT DESIGN

Gentle seat contouring supports pelvic positioning and seated stability, enhancing comfort during longer periods of sitting.
